

Appointment Reminder Bot

GENZ FOR GENAI INITIATIVE

Problem Statement

PEOPLE FORGET APPOINTMENTS

Many individuals struggle to remember their **upcoming appointments**, leading to missed opportunities and increased stress in managing their schedules.

MISSED APPOINTMENTS ARE INEFFICIENT

The consequences of missed appointments include wasted time and resources, making it essential to find reliable solutions to improve attendance.

Chatbot-Based Appointment Reminder System

INTELLIGENT AUTOMATION SOLUTION

Our chatbot-based system **automates** appointment reminders, collects user details, and generates **timely** notifications based on individual preferences, enhancing efficiency.

Role of GenAI in Reminders

LLM ANALYSIS

The ScaleDown LLM effectively analyzes appointment details and user preferences, ensuring tailored and relevant reminder messages for each individual.

NATURAL REMINDERS

By generating natural-sounding reminders, the LLM enhances user experience, making it easier to understand and act upon scheduled appointments.

BEHAVIOR SIMULATION

The prototype simulates LLM behavior for demonstration purposes, illustrating its potential capabilities and paving the way for future real-world applications.

Technology Stack and Key Features

APPOINTMENT SCHEDULING

The system allows users to easily schedule appointments through a simple interface, ensuring they can manage their time effectively.

REMINDER CHANNEL SELECTION

Users can choose their preferred method for receiving reminders, like SMS, Email, or Push notifications, enhancing the system's usability.

NO-SHOW RISK INDICATION

The bot indicates potential no-show risks by analyzing user behavior, helping users to be more proactive in managing their schedules.

Thank You for Your Attention!
